c2sc (Small Capitals From Capitals)

If turned on, this feature changes capital letters to small capitals in all casing alphabets. They have the same heights as small letters, and Catrinity does not distinguish between small caps and petite caps.

case (Case Sensitive Punctuation)

If turned on, this feature aligns many punctuation characters with uppercase height instead of lowercase, so that they don't look awkward in all-uppercase text.

final, init, isol and medi (Final, Initial, Isolated and Medial Forms)

These four features select the correct forms of Arabic and Nko letters depending on the context (i.e. the surrounding letters). They are on by default, and Arabic writing without proper form changing is considered wrong. If you need a specific letter form outside its usual context, you can find it in Arabic Presentation Forms-A, Arabic Presentation Forms-B or Mathematical Arabic Alphabetic Symbols. You can also influence letter forms by surrounding them with U+640 _ ARABIC TATWEEL (to connect with) or any of the spaces (to prevent connections).

locl (Localized Forms)

This feature replaces some letters and digits with localized forms depending on the document's script and language. It is on by default and it should apply the correct letter forms automatically if the rendering program knows the document's script and language.

mark (Mark Positioning)

This feature cares about the placement of diacritical marks on base letters. It is on by default, and there is no good reason to turn it off.

Due to the huge number of glyphs in Catrinity, not all of them are instructed to work with all marks.

- *General*

These letters and symbols are used for many languages and for mathematical purposes, and can therefore be combined with all the “general” marks from various blocks.

• Lines

The following combining lines have fixed vertical positions, but their widths are automatically adjusted to the base letters. They work with the basic letters of Latin, Greek, Cyrillic, Coptic, the fullwidth variants of Latin, and the digits 0-9. Note that the vertical positions of U+FA753 and U+FA754 are affected by 'case'.

mkmk (Mark To Mark Positioning)

This feature allows stacking diacritical marks. It is on by default, and there is no good reason to turn it off. It works with all the general marks shown above under ‘mark’.

onum (Oldstyle Figures)

If turned on, this feature changes figures from lining (default) style to oldstyle forms.

(6 and 8 are not actually changed.)

rlig (Required Ligatures)

This feature composes ligatures that are explicitly required, e.g. by the usage of U+2D7F TIFINAGH CONSONANT JOINER or U+200D ZERO WIDTH JOINER [ZWJ]. It is also used to compose emoji that are single characters, but not mapped to single codepoints, and for applying skin tones to emoji. It is on by default and should not be turned off.

All the ligature glyphs are found in the Code Charts, below the block that the first component belongs to.

rtlm (Right-to-left Mirrored Forms)

This feature mirrors many characters for right-to-left contexts. It should be applied automatically when these characters are surrounded by right-to-left letters (e.g. Hebrew or Arabic) or controls, or the text direction is explicitly specified (e.g. by dir="rtl" in HTML).

salt (Stylistic Alternates)

If turned on, this feature changes a and g to their simpler forms.

sinf (Scientific Inferiors)

If turned on, this feature changes figures to subscript figures, for use in chemical or mathematical formulas like e.g. H₂CO₃.

smcp (Small Capitals)

If turned on, this feature changes small letters to small capitals in all casing alphabets. They have the same heights as small letters, and Catrinity does not distinguish between small caps and petite caps. Some small capitals look the same as the corresponding small letters; these are not shown here.

tnum (Tabular Figures)

If turned on, this feature changes figures to all have the same width within one set. It is a rather subtle change, but makes them align better in tables.

zero (Slashed Zero)

If turned on, this feature adds a slash to all zero-ish characters. See also 's01' for dotted zeroes.
